

BPL will not only destroy ham radio, but all other services that use the HF spectrum. When the FCC recently allowed "channelized operation on 60 meters, it was severely restriced because of possible interference to government stations operating in the interest of Homeland Security. We have telephones, satellite dishes, multiple ways of getting high speed internet connections. Coupled with the interference that it would cause to devices not properly shielded, BPL do much more harm than good. I would ask that a careful technical examination be performed and then I believe the Commission will say no to BPL.

Thank you, John Ellis, NP2B
